No Dies Required

No Make-ready

No Skilled Operator

Spot Varnish Effects

The Perfect Solution for Proofs, Short Run Jobs and Personalisation

The FoilTech FT-10 Junior is the latest in the range of foil fusing machines from Caslon Limited. This hand fed model works from a toner image to produce a foiled effect and is ideal for short runs, personalisation and proofs, mock-ups or in the craft world.

The machine will accept sheets up to 320mm wide and of any length. As it foils from a toner image there is no requirement for a negative or an expensive metal die. No special make-ready supplies, training or skills are required to produce beautiful flat foil stamping with either the FT-10 Junior or any other FoilTech model.

FoilTech Foil is available in a range of colours and effects, including wallpaper holograms. Rolls are available at 305mm wide or specific widths can be supplied cut to size. To really increase profits, consider our Foil Cutter and never waste another centimeter of foil.

We also supply clear film for Therm-O-Fusing. The image quality and the durability from a full colour laser printer, compared to offset printing, whilst being acceptable is far from permanent. Generally it is considered "good enough" for many applications. However, Therm-O-Fusing with a smooth plastic film changes it dramatically. The result is an image that is permanent, more dense, uniform and has a glossy finish, which on solid areas is similar to spot varnishing.

Specifications

Machine Size:	500 x 350 x 220 (h) mm	Stock Size:	Up to 320mm wide
Machine Weight:	21 kgs	Feed System:	Manual
Machine Size Packed:	560 x 580 x 420 (h) mm	Foil Rolls:	150m or 120m x 305mm wide
Machine Weight Packed:	24 kgs	Electrics:	220 Volts
